Azure Information Protection (AIP) is a cloud-based solution that enables organizations to discover, classify, and protect documents and emails by applying labels to content.

AIP is part of the Microsoft Information Protection (MIP) solution and extends the labeling and classification functionality provided by Microsoft 365.

Microsoft Cloud App Security

Microsoft Cloud App Security (MCAS) is a Cloud Access Security Broker (CASB) solution that gives organizations visibility into their cloud apps and services, provides sophisticated analytics to identify and combat cyber threats, and lets them control how data travels—across any cloud app.

How do users benefit from the service?
MCAS discovers and assesses Shadow IT, provides threat protection across first- and third-party cloud apps, and protects information across first- and third-party cloud apps.

Data loss prevention (DLP) is a compliance feature designed to help your organization prevent the unintentional or accidental exposure of sensitive information to unwanted parties. DLP has its roots in Exchange Server and Exchange Online, and is also applicable in SharePoint Online and OneDrive for Business.

Microsoft Defender ATP

Microsoft Defender ATP is an endpoint security solution that includes risk-based vulnerability management and assessment; attack surface reduction capabilities; behavioral based and cloud-powered next generation protection; endpoint detection and response (EDR); automatic investigation and remediation; and managed hunting services.
